JuniOrtho™ is a range of products and resources created by Orthofix, dedicated to children and young adults with bone fractures and deformities.

You can’t always see the hero inside...
A broad portfolio of solutions

The JuniOrtho® team is committed to thinking, planning and engineering products and services for kids and young adults. We believe that adapting standard adult products to children is simply suboptimal and we are changing that. We offer innovative and minimally invasive solutions for surgeons to help improve the quality of life of our patients.

Our orthopaedics products are designed to address the lifelong bone-and-joint health needs of patients. Our well-rounded product lines offer comprehensive solutions within both the limb reconstruction and trauma specialties.

“Free the child’s potential, and you will transform him into the world”

Maria Montessori
TL-HEX TrueLok Hexapod System®

It consists of hardware and associated software for simplified deformity correction and trauma management.
TL-HEX TrueLok Hexapod System®

Hardware

1. Excellent Stability
   Unique strut head design increases frame stability

2. Fast Locking
   One set screw locks down both struts
   NEW SET SCREW DESIGN

3. Rapid Adjustment
   TL-HEX Struts consist of two telescoping aluminum tubes, which can be locked together at various lengths using the side locking bolt and clamp washer

4. Easy Adjustment
   Simple pull and click method for patient adjustment

Software

The intuitive and user friendly web-based TL-HEX Software is empowering all surgeons who want comprehensive support throughout pre/intra/post operative phases.

The HEX-ray™ Integrated Module is designed to facilitate pre-operative planning and post-operative correction. By uploading digital x-ray images on the software, the surgeon can obtain:

- Measurement calculation
- Frame templates in preplanning
- Automatic data input into TL-HEX Software
Patient Support Tools

Treatment with the TL-HEX TrueLok Hexapod System™ is not exactly child’s play. However, playing games can support the treatment process and give kids the “power” to face the challenge. JuniOrtho™ Paediatrics powered by Orthofix™ has developed a set of tools specifically designed for paediatric patients.

KIT FOR KIDS

Varied fun games to entertain the young patient and help the surgeon and the parents explain their treatment. It should be delivered by the surgeon or care team members and it includes tips for parents and caregivers.

COMIC STRIP

Two very “normal” preteen kids find the rings and the struts and in putting these items together, they enter a magic world where they have the chance to become superheroes. The story of Tommy and Linda does not exactly reflect the TL-HEX treatment. It is intended as the launch “platform” to mySuperheroAcademy™ edugame.

mySuperheroAcademy™

A quiz area designed to educate paediatric patients during the pre-surgery meetings with the orthopaedic surgeon or the care team members. Four match3 and eight runner games will entertain patients 10-15 years old. Unlocking code required (printed on the comic strip).

myHEXplan™

Adult patients and families

A successful treatment with TL-HEX is not simply a matter of correct strut adjustment. The TL-HEX patient is supported from the first day after surgery until the device removal, through all the treatment phases, with reminders about pin site care and strut adjustments, mood self-assessment and insights into the treatment.
Care HEXcelflence

We are not just suppliers of paediatric products – we immerse ourselves in the process and offer help and support before, during and after surgery.

Some materials/services may not be available in your Country. Please contact your sales representatives for availability.
MJ-FLEX The New Metaizeau Nail™

An intramedullary implant system specifically designed for Elastic Stable Intramedullary Nailing (ESIN) fracture fixation.

Galaxy Fixation™

Galaxy Fixation is a modular external fixation system for fracture treatments of lower and upper limbs.

LRS pediatric

The Paediatric LRS System aims to successfully treat congenital and post-traumatic deformities in children.
AGILE Nail™
Designed to address femoral fractures and deformity correction procedures. It consists of antegrade intramedullary nails for the femur with respective end-caps and locking screws.

eight-Plate Guided Growth System +™
An extra-periosteal plate that uses the robust growth potential of the child’s physis to gently guide correction of angular deformity.

Small DAF
A modular system intended as a means for stabilization of bone segments in a broad range of indications, including fractures and angular corrections (hemicallotasis).
JuniOrtho™ Plating System

A complete plating system developed to address the specific demands of advanced deformity and trauma reconstruction of the lower extremities.

Hardware

Adjustable Instrument Tray
Modular and interchangeable instrument trays

Sterile Single-Use Implants and Tools
Optimal efficiency and cost reduction

Anatomical Design
Comprehensive options with locking and non-locking screws
Software

The pre-planning software option streamlines the implant selection in the surgery room for the surgical procedure.

- **Accurate**: accurate calibration, measurements and templating.
- **Ease of use**: guided planning process and simple user interface.
- **Streamlined surgery and time-saving**: pre-operative surgical plan available with appropriate instrument tray and hardware device selection.
The FITBONE® TAA Intramedullary Lengthening System is intended for limb lengthening of the femur and tibia. With appropriate preoperative planning, it is possible to make axial and torsional corrections as part of limb lengthening. It is also indicated for use on adolescents (pediatric >12 years of age).

**Precision**

- Instruments designed not only for lengthening but for optimal limb alignment
- Protection of soft-tissues with minimally-invasive instrumentation
- Safe alignment assessment and blocking screw placement with dummy (trial) nail

*Strong stainless steel nail with dedicated trial for accuracy*²³⁴ and final check

**Power**

- Reliable power direct to the nail¹
- High distraction force independent of nail size¹
- No soft-tissue limitation
- Power transferred to the nail with a small portable control set
- No magnets within the control set, therefore, no interference with magnetic instruments or devices

*Safe reaming via a minimally-invasive approach*⁴

*No need for unreliable magnetic fields*

*Optimal limb alignment via unique instrumentation to assist in correction*²³⁴

*Reliable power no matter the size of patient or implant*¹
Fit

Bone is reamed to exactly fit the implant
No over-reaming necessary

Software

Dedicated Reverse Planning
Method module for lengthening nails

Easy to use

Optimising limb alignment and lengthening

Accurate calibration, measurements and templating

Optimised inventory sent to OR
Indications

**TL-HEX TrueLok Hexapod System®**

The TL-HEX System is intended for limb lengthening by metaphyseal or epiphyseal distractions, fixation of open and closed fractures, treatment of non-union or pseudoarthrosis of long bones, and correction of bony or soft tissue defects or deformities.

**AGILE Nail™**

The Agile Nail is intended for insertion in the medullary canal of a femur for the alignment and the stabilization of fractures and for the correction of deformities. It is indicated for the treatment of subtrochanteric fractures and of femoral shaft fractures in pediatric patients, with the exception of newborns and infants, and in adult patients with an appropriate medullary canal. The indications include: prophylactic nailing of impending pathologic fractures; fixation of femurs that have been surgically prepared (ostectomy); nonunions and malunions; reconstruction following tumor resection and grafting, and bone lengthening and shortening.

**JuniOrtho™ Plating System**

The JPS is indicated for internal fixation and stabilization of femoral and tibial fractures, osteotomies, mal-unions and non-unions. Specific condition/diseases for which the device is indicated include: varus, valgus, rotational and/or shortening osteotomies, femoral neck and/or pertrochanteric fractures, proximal and distal metaphyseal fractures, pathological and impending pathological fractures.

**eight-Plate Guided Growth System +™**

Indicated for gradually correcting angular growth deformities in growing children. Specific conditions/diseases for which the device will be indicated include: valgus, varus or flexion, extension deformities of the knee (femur and/or tibia); valgus, varus, or plantar flexion deformities of the ankle.

**FITBONE®**

The FITBONE® TAA Intramedullary Lengthening System is intended for limb lengthening of the femur and tibia. With appropriate preoperative planning, it is possible to make axial and torsional corrections as part of limb lengthening.
### Benefits to Surgeon
- Simple: it provides simplified Hardware and Software for both Deformity and Trauma management.
- Stable: it provides exceptional stability due to its unique aluminum-stainless steel and metal-plastic interface.
- Versatile: the distinctive strut design allows for acute and gradual adjustment in deformity correction and complex trauma procedures.

### Benefits to Patient
- Stability with proven limited movements at the bone site may enhance the bone healing and reduce pain.
- 0.5mm increments in the correction permits a gradual correction of the deformity.
- Aluminium rings make the system lighter.
- Dedicated support materials for patients.
- No need for a second surgery for removal (compared to internal fixation).

Indications

**MJ-FLEX The New Metaizeau Nail™**

The MJ-FLEX is indicated to treat:
- upper extremity and clavicle fractures in all patients except newborns and infants;
- lower extremity fractures in pediatric patients, except newborns and infants, where the flexibility of the implant is paramount not to disrupt the growth plate;
- lower extremity fractures in small adults where the medullary canal is narrow.

**Galaxy Fixation™**

The Galaxy Fixation System is intended to be used for bone stabilization in trauma and orthopaedic procedures, both on adults and all paediatric subgroups except newborns as required.

**Small DAF**

The small DAF™ is a modular system intended as a means for stabilization of bone segments in a broad range of indications, including fractures and angular corrections.

**LRS paediatric**

Limb reconstruction and lengthening due to fresh fracture, nonunion with major soft tissue defect, and bone loss with shortening.
