

Patient testimonials

“The value of testimonials and narrative medicine lies in the elaboration of the experience that allows the patients to reflect on their conditions and become the leading actor of their personal care journey. At the same time, the storytelling encourages empathy and promote understanding between clinician and patient, and a holistic approach to the management of a person with a disease. Actual patients presenting their experience, covering also fears or concerns about the procedure, may be helpful also for new patients starting the deformity correction treatment journey.”

Materials for adult patients and families

From the very beginning to the end of the treatment, beside your patient

TL-HEX TrueLok Hexapod System™ is not simply a product. In the context of a deformity correction with a device such as TL-HEX, the outcome of the treatment may also be influenced by the patient commitment and adherence to the post-operative protocol. Therefore, as we are focused on supporting you to gain a better patient outcome, a brand new set of patient support materials has been developed, for both pre- and post-surgery phases.

LIMBHEALING.COM

This site provides education, support and resources to empower patients with a limb deformity and their families.

Surgeon locator: An additional service to the patients, included on the website. It enables patients to find contact information for surgeons or specialists, by geographic area, authorized to use TrueLok/TL-HEX software module.

INFORMATIVE BROCHURE

Intended to be used during the pre-surgery meeting, as a guide to discuss the proposed surgery and answer the most common questions and concerns.

myHEXplan™

A successful treatment with TL-HEX is not simply a matter of correct strut adjustment. The TL-HEX patient is supported from the first day after surgery until the device removal, through all the treatment phases, with struts adjustment and pin-sites care reminders, mood self-assessment and insights to the treatment.

Materials for children and teenagers

The healing power of games

Treatment with the TL-HEX TrueLok Hexapod System™ is not exactly a child's game. However, playing games can support the treatment process and give kids the “power” to face the challenge. JuniOrtho™ Paediatrics powered by Orthofix® has developed a set of tools specifically designed for paediatric patients.

KIT FOR KIDS

Varied fun games to entertain the young patient and help the surgeon and the parents explain their treatment. It should be delivered by the surgeon or care team members and it includes tips for parents and caregivers.

COMIC STRIP

Two very “normal” pre-teen kids find the rings and the struts and in putting these items together, they enter a magic world where they have the chance to become superheroes. The story of Tommy and Linda does not exactly reflect the TL-HEX treatment. It is intended as the launch “platform” to mySuperheroAcademy™ edugame.

mySuperheroAcademy™

A quiz area designed to educate paediatric patients during the pre-surgery meetings with the orthopaedic surgeon or the care team members. 4 match3 and 8 runner games will entertain patients 10-15 years old. Unlocking code required (printed on the comic strip).

Some materials/services may not be available in your Country.
Please contact your sales representatives for availability.
